

DON'T MAKE ME ZOOM

7 Reasons Industrials and B2Bs Need Responsive Websites

IN A NUTSHELL

“If your company depends on its website enough, that losing the business it brings to you would be a serious blow, getting a responsive website before the end of the year should be your #1 online marketing goal.”

—Joshua Steimle, [forbes.com](https://www.forbes.com)

WHAT IS A RESPONSIVE WEBSITE?

A responsive website is a website that is fully functional on all browsing devices, including:

Desktops and Laptops

Smartphones

Tablets

YOU KNOW IT WHEN YOU DON'T SEE IT

If you've ever viewed a website on your smartphone and had a frustrating experience, you've browsed a site that is not responsive.

Responsive

Pinching and Side-Scrolling

VS

HOW RESPONSIVE DESIGN WORKS

Responsive websites are built using a grid divided into columns. These columns reorganize themselves in response to typical screen widths.

Smartphone

320 pixels

Tablet

768 pixels

Desktop and Laptop

960 pixels

THE POWER OF ONE

That way, the same website is usable —
and user-friendly — on any standard device.

WHY INDUSTRIALS NEED A RESPONSIVE WEBSITE

Technical buyers are increasingly using mobile devices during the course of the industrial buying process.*

7 REASONS TO GO RESPONSIVE

A responsive website:

1. Accommodates how customers use websites
2. Ensures your content is universally accessible
3. Integrates your online marketing
4. Makes site updates efficient, reducing costs
5. Improves your SEO
6. Puts all your site analytics in one place
7. Increases on-site conversions

REASON #1: WHAT CUSTOMERS WANT

According to Google, 90% of consumers use at least two devices before completing their buying process.

Locate on one device

**Complete transaction on
second device**

REASON #2: CONTINUITY OF CONTENT

With a responsive website, a customer encounters the same content every time they visit your site — no matter which device they use.

REASON #3: MARKETING INTEGRATION

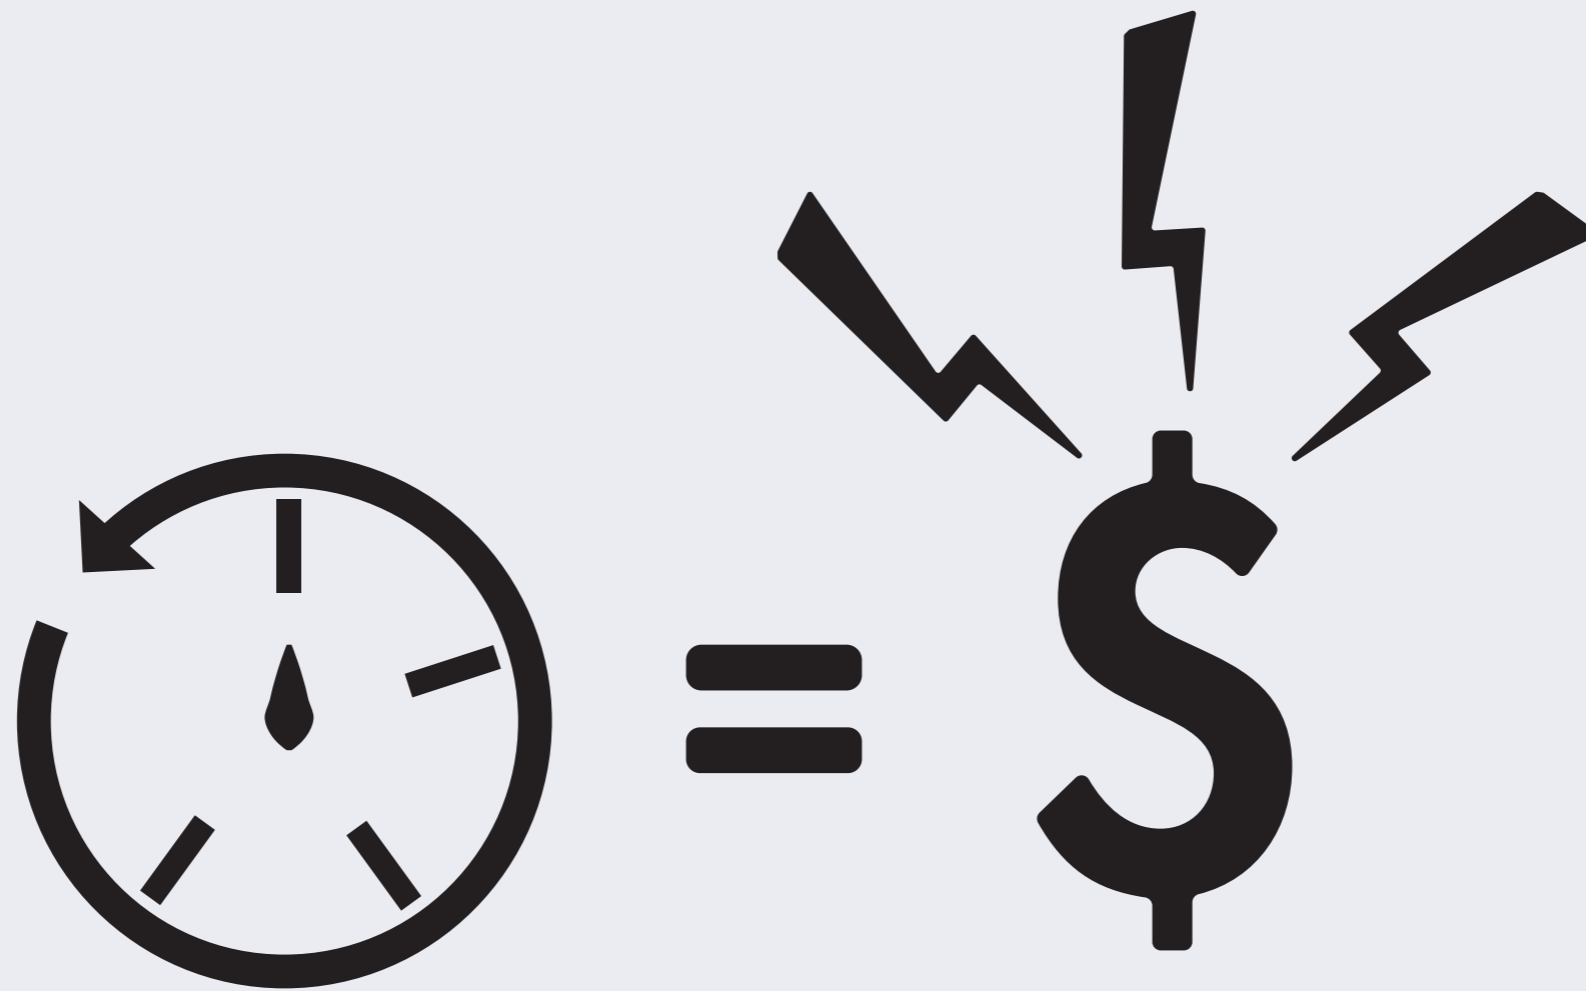

Typical online marketing channels include:

Email | Search Advertising | Social Media

These channels often intercept customers on mobile devices. Since most converge on your website, it should display properly on smartphones and tablets, too.

REASON #4: EASY MAINTENANCE

With a responsive site, you only need to maintain one website, rather than an array of device-specific sites. This saves time and money.

REASON #5: SEARCH ENGINE OPTIMIZATION

Google endorses responsive websites. And two features of responsive design inherently boost rankings with search engines:

- All visitors — no matter what device they use — get routed to the same URL.
- Users have better experiences and are always able to access the full site.

REASON #6: ALL-IN-ONE ANALYTICS

Because a responsive website has one URL, all analytics data lives in one place.

REASON #7: RESPONSIVE RESULTS

Our clients who have opted for responsive websites have seen dramatic increases in onsite conversions.

109% increase in goal completions

44.35% increase in website conversion rate

44.84% increase in website traffic

100% increase in website conversion rate

884% increase in website traffic

10x increase in conversion
